

Out of Memory

- Most affected system: Windows 32-bit with recent versions of Matlab
 - Buy more RAM
 - Close all programs, remove Windows services (Adobe etc...), reboot
 - Try different memory manager “start Matlab from the DOS command line with *matlab –memmgr fast* option
 - Use older Matlab versions (how old?)
 - Change of OS (Windows 7 might have less problems than Win XP)
 - Look at <http://www.mathworks.com/support/tech-notes/1100/1107.html>
- OSx and Unix/Linux
 - Buy more RAM
 - Matlab cannot allocated inactive memory. To free it, type *du -sx /*

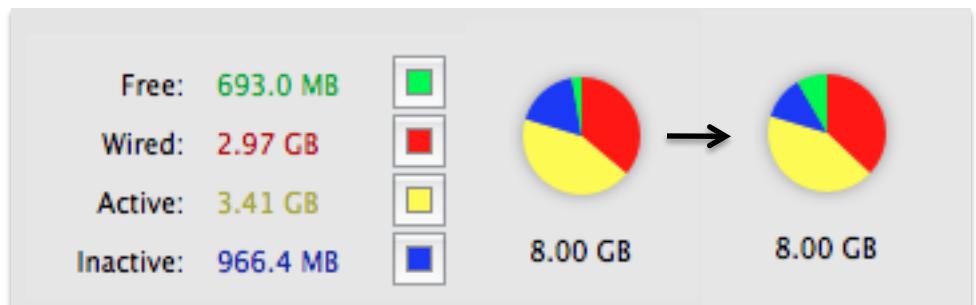

Figure problem

and export

For crashes, freezes, etc... use a non Open-GL renderer

At startup type in `set(0,'defaultrenderer','zbuffer')` or `set(0,'defaultrenderer','painter')`. Note that these cannot handle transparency and 3-D graphics

To export figures for publication, use .eps format (postscript) and edit for instance with adobe illustrator. Use “`set(gcf, 'renderer', 'painter')`” before exporting complex figures. Use the “`plot2svg`” matlab toolbox to export figure for transparency.

Writing EEGLAB plugins

- Assuming that you have a signal processing function called `xxxxx` → Process any Input data `Timef()`
- a `pop_xxxxx` function will interface your signal processing function → Process EEG structure `Pop_timef()`
- a `eegplugin_xxxxx` function will add the menu to the main interface (and history etc...)

Pop functions

- Called with the EEG structure only `pop_xxxxx(EEG)`, they pop-up a GUI asking for more arguments
- Called with enough arguments, they simply call the signal processing function

```
function [EEG, com] = pop_sample( EEG, param1 );  
  
com = ""; % empty history  
if nargin < 2  
    % pop up window if less than 2 arguments  
    result = inputdlg({ 'Enter the parameter:' }, 'Title of window', 1, { '0' })  
    if length( result ) == 0 return; end;  
  
    param1 = eval( [ '[' result{1} ']' ] ); % the brackets allow to process matlab arrays  
end;  
  
sample( EEG.data, param1); % run sample function  
  
com = sprintf('pop_sample(EEG, %d );', param1); % return history
```

eegplugin functions

- eegplugin_xxxx function

```
% eegplugin_erp() - plot ERP plugin

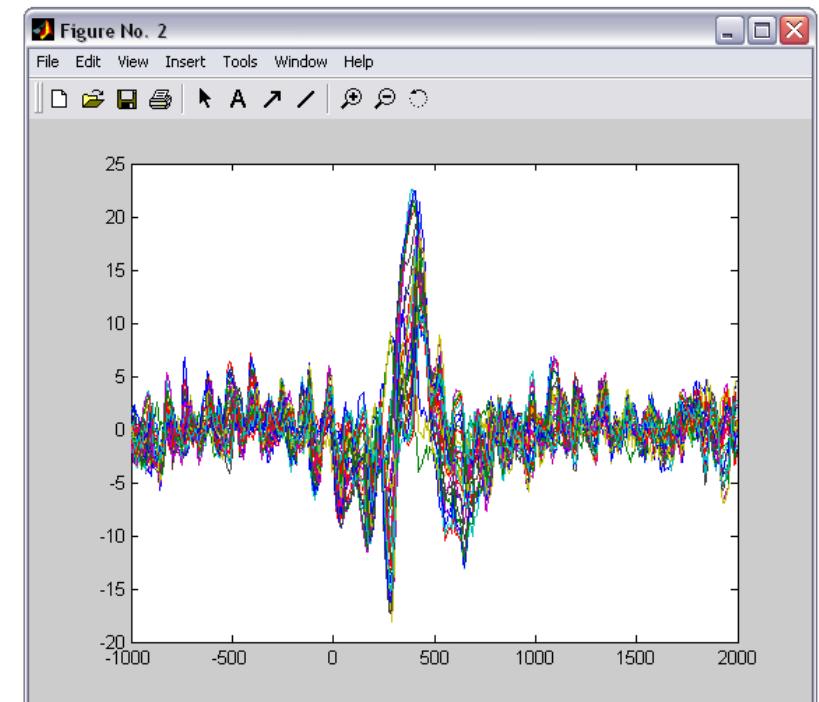

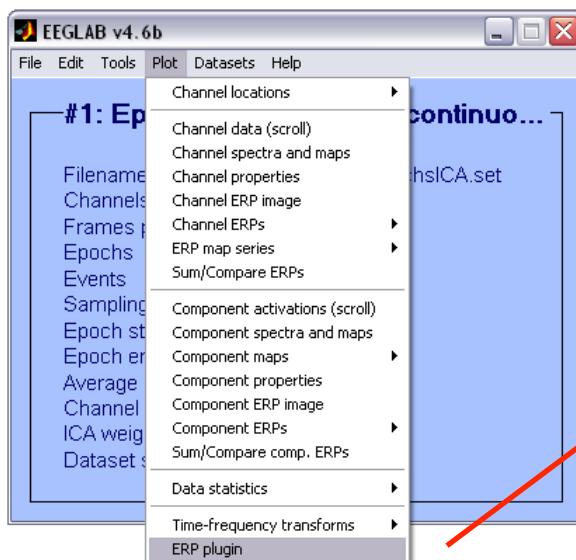

function eegplugin_erp( fig, try_strings, catch_strings);

% create menu
plotmenu = findobj(fig, 'tag', 'plot'); % find plot menu

% create submenu
uimenu( plotmenu, 'label', 'ERP plugin', ...
    'callback', 'figure; plot(EEG.times, mean(EEG.data,3));');
```
