

Out of Memory

- Most affected system: Windows 32-bit with recent versions of Matlab
 - Buy more RAM
 - Use option “use memory mapped arrays”
 - Close all programs, remove Windows services (Adobe etc...), reboot
 - Try different memory manager “start Matlab from the DOS command line with *matlab –memmgr fast* option
 - Use older Matlab versions (how old?)
 - Change of OS (Windows 7 might have less problems than Win XP)
 - Look at <http://www.mathworks.com/support/tech-notes/1100/1107.html>
- OSx and Unix/Linux
 - Buy more RAM
 - Matlab cannot allocated inactive memory. To free it, type *du -sx /*

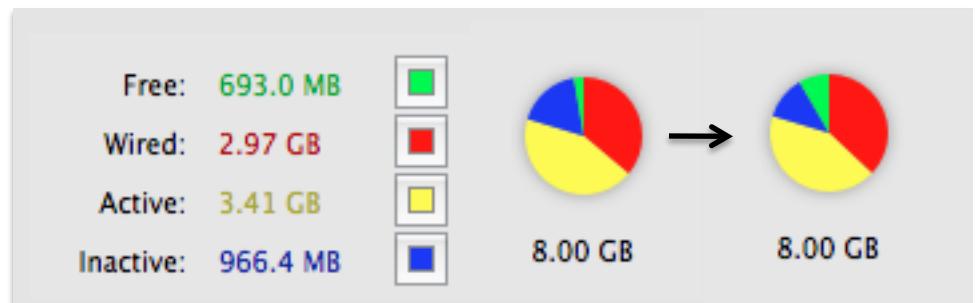

Figure problem

and export

For crashes, freezes, etc... use a non OpenGL renderer

At startup type in `set(0,'defaultrenderer','zbuffer')` or
`set(0,'defaultrenderer','painter')`. Note that these cannot handle
transparency and 3-D graphics or type “opengl software”

To export figures for publication, use .eps format (postscript) and edit for
instance with adobe illustrator. Use “`set(gcf, 'renderer', 'painter')`” before
exporting complex figures. Use the “`plot2svg`” matlab toolbox to export
figure for transparency.

EEGLAB plugins

eepimport1.02	Data importing for EEprobe data (Oostenveld & ANT company)
bva_io1.30	Brain vision analyzer import/export plugin (Widmann & Delorme)
ctfimport1.01	MEG CTF import plugin (Carver, Weber & Delorme)
dipfit2.0	4-shell and BEM (Oostenveld & Delorme)
fmrib1.2b	Removal of artifact from simultaneously EEG/fMRI recording (Niazi)
icaclust1.00	Clustering ICA components (Serby, Delorme, Makeig)
iirfilt1.0	Non-linear IIR filtering (Pozdin)
loreta1.0	Interface to LORETA-KEY (Delorme)
newtimefreq1.00	Time-freq. decomposition (Delorme)

**Better than FIR
Coregistration...**

Matlab toolboxes interfaced

BIOSIG	Data importing for rare data binary format (Schloegl)
Fieldtrip	Source localization and time-freq. decompositions (Oostenveld)
ICALAB	20 ICA algorithms (automatically detected by EEGLAB)
SPM2	Spatial normalization of anatomical MRI

Plugin name	Version	Short plugin description	Link	Comments
brainmovie	0.1	Brainmovies (command line only)	Download	User comments
corrmap	1.03	Import BIOPAC data files	Download	User comments
eeg_toolbox	1.0	Interface EEG toolbox functions for ERP peak detection	Download	User comments
ERPLABfilters	1.00	Interface ERPLAB filters (requires separate ERPLAB installation)	Download	User comments
fMRIb	1.21	Remove fMRI artifacts from EEG	Download	User comments
MP_clustering	1.00	Measure projection clustering of ICA components	Download	User comments
MutualInfoClustering	1.00	Mutual information clustering	Download	User comments
StudyEnvtopo	0.9	Add envtopo capabilities to STUDY	Download	User comments
VisEd	1.04	Add/Edit dataset events	Download	User comments
ADJUST	1.21	Automatic artifact rejection	Download	User comments
iirfilt	1.02	Non linear filtering	Download	User comments
loreta	1.0	Export and import data to/from LORETA software	Download	User comments
BERGEN	1.1	Removal of fMRI-related gradient artifacts from simultaneous EEG-fMRI data	Download	User comments

Add your plugin to the list

You may add your plugin to the list so users can download it automatically from within EEGLAB. There are 5 tabs:

- **Plugin name:** this tab should contain the abbreviated name of your plugin and if necessary a link to the plugin documentation. The plugin documentation may be stored on this wiki.
- **Version:** this tab should contain the version of your plugin. The version listed on this page and the one made available in the eegplugin_xxx.m file must be consistent. This allows EEGLAB to automatically check for newer versions of your plugin.
- **Short plugin description:** this tab should contain a short plugin description (no more than one line). Additional documentation may be provided as a link in tab 1.

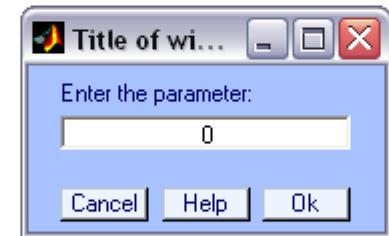

Writing EEGLAB plugins

- Assuming that you have a signal processing function called `xxxxx` → Process any Input data `Timef()`
- a `pop_xxxxx` function will interface your signal processing function → Process EEG structure `Pop_timef()`
- a `eegplugin_xxxxx` function will add the menu to the main interface (and history etc...)

Pop functions

- Called with the EEG structure only `pop_xxxxx(EEG)`, they pop-up a GUI asking for more arguments
- Called with enough arguments, they simply call the signal processing function

```
function [EEG, com] = pop_sample( EEG, param1 );  
  
com = ""; % empty history  
if nargin < 2  
    % pop up window if less than 2 arguments  
    result = inputdlg({ 'Enter the parameter:' }, 'Title of window', 1, { '0' })  
    if length( result ) == 0 return; end;  
  
    param1 = eval( [ '[' result{1} ']' ] ); % the brackets allow to process matlab arrays  
end;  
  
sample( EEG.data, param1); % run sample function  
  
com = sprintf('pop_sample(EEG, %d );', param1); % return history
```

eegplugin functions

- eegplugin_xxxx function

```
% eegplugin_erp() - plot ERP plugin

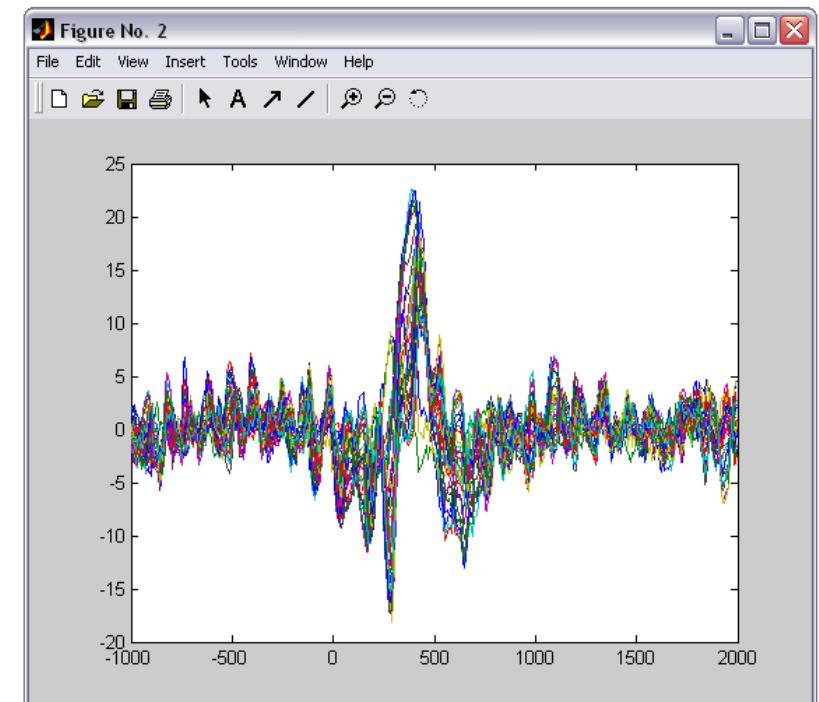

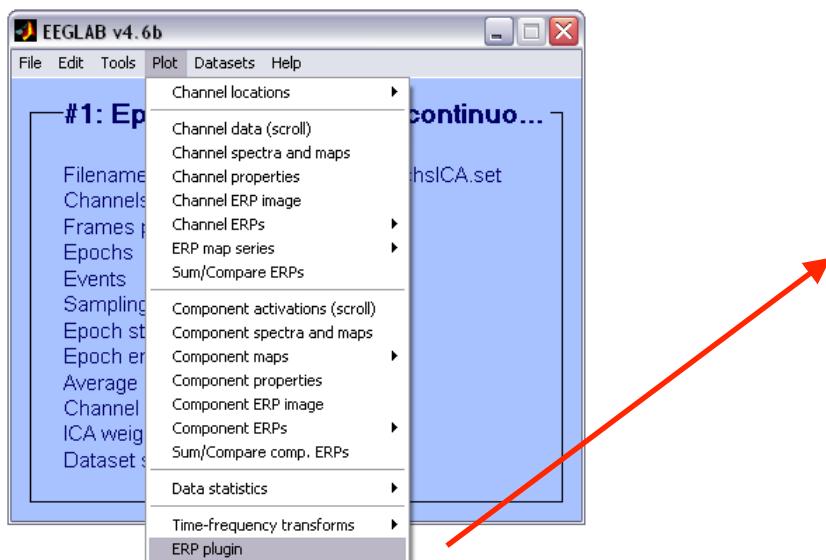

function eegplugin_erp( fig, try_strings, catch_strings);

% create menu
plotmenu = findobj(fig, 'tag', 'plot'); % find plot menu

% create submenu
uimenu( plotmenu, 'label', 'ERP plugin', ...
    'callback', 'figure; plot(EEG.times, mean(EEG.data,3));');
```
