<input type="text"/>	<input data-bbox="1522 1104 1570 1141" type="button" value="..."/>
<input type="text"/>	<input data-bbox="1522 1157 1570 1195" type="button" value="..."/>
<input type="text"/>	<input data-bbox="1522 1211 1570 1248" type="button" value="..."/>
<input type="text"/>	<input data-bbox="1522 1265 1570 1302" type="button" value="..."/>
<input type="text"/>	<input data-bbox="1522 1318 1570 1356" type="button" value="..."/>

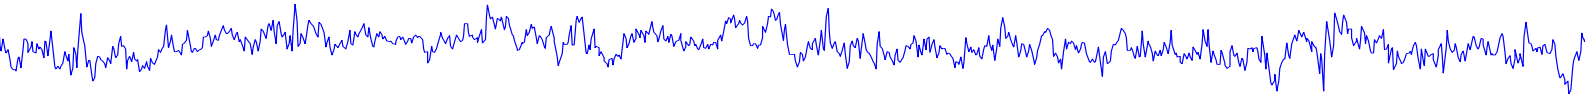

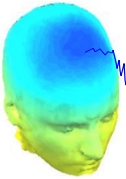

When using more than 1 condition, datasets on each line must correspond to the same subject.

Create simple ERP STUDY

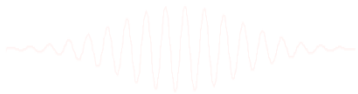

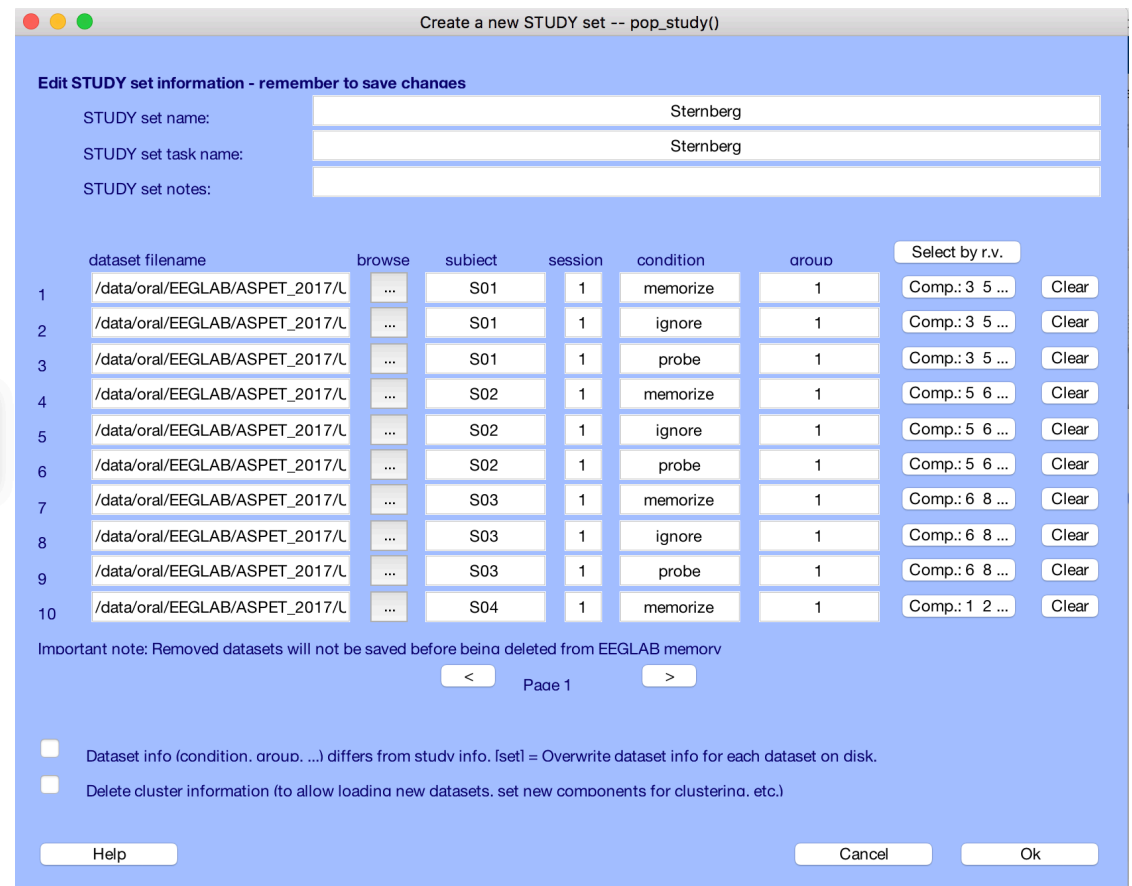

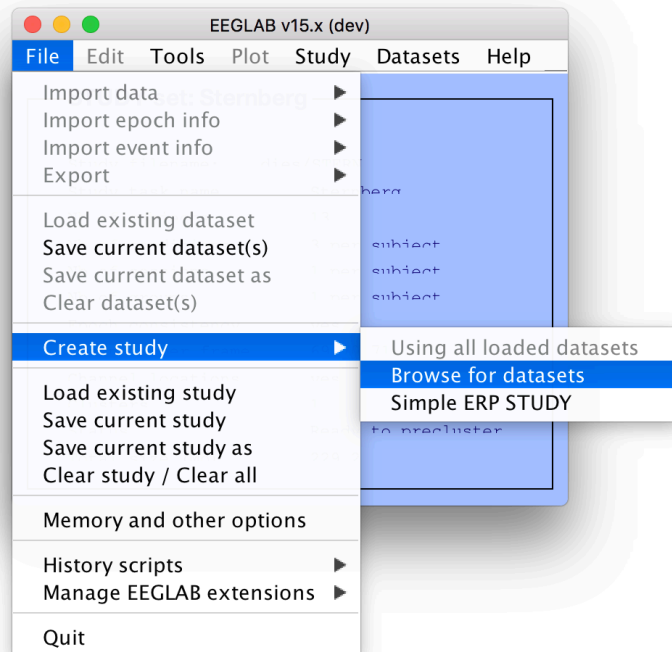

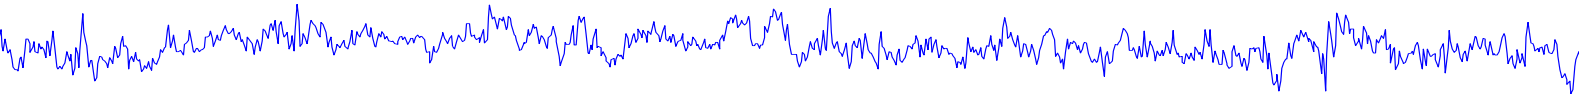

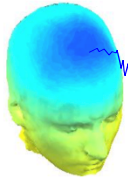

Exercises

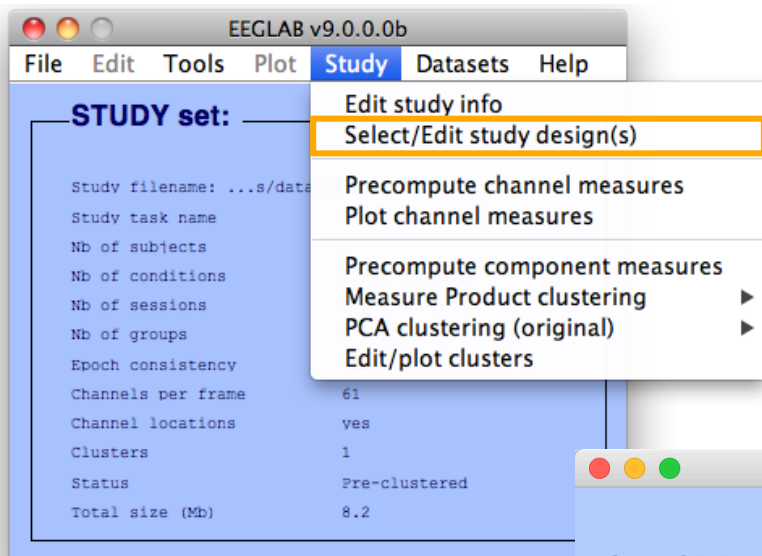

Suggestion for exercise

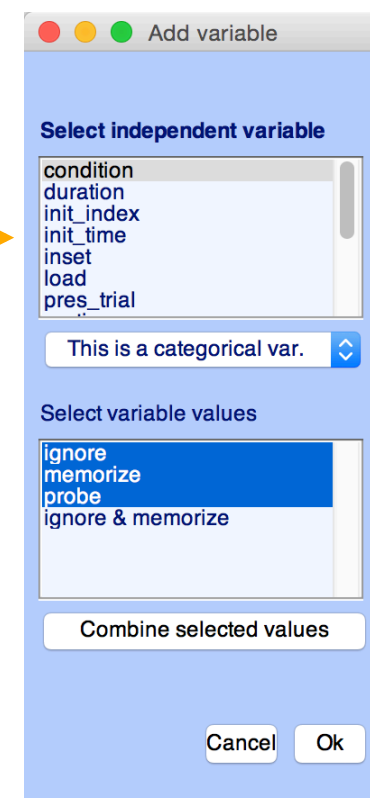

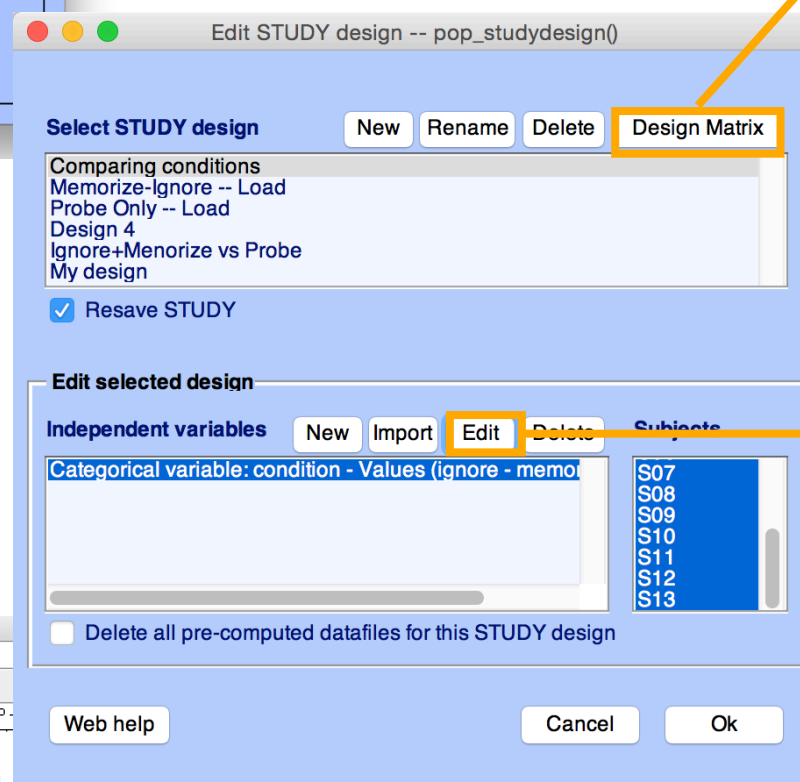

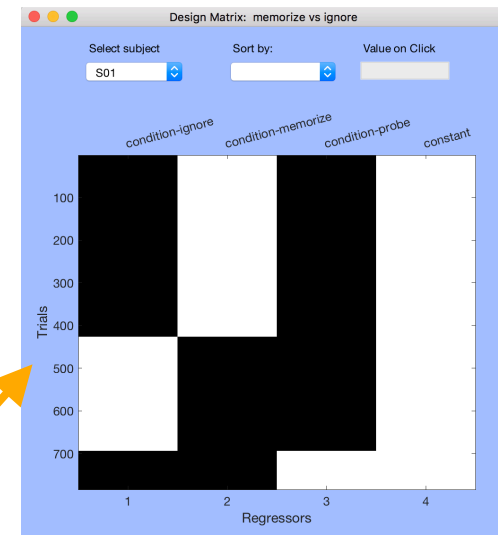

1. From the GUI, select “File > Create STUDY > Simple ERP STUDY”
2. Enter 2 conditions “letter-ignore” and “letter-memorize”
3. In the column for “letter-ignore” select datasets “ignore.set” for 3 subjects S01, S02, S03 (in the STUDY folder)
4. In the column for “letter-memorize” select datasets “memorize.set” for 3 subjects S01, S02, S03 (in the STUDY folder)
5. Press OK.

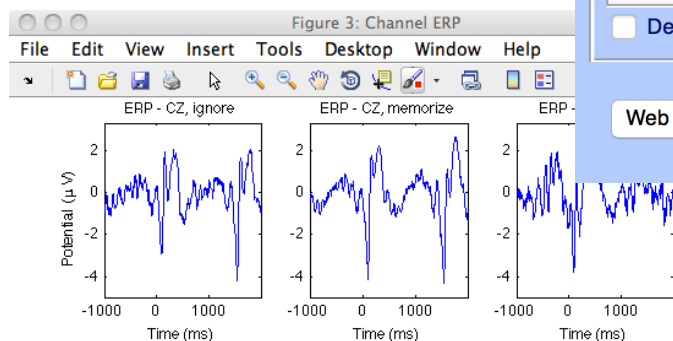

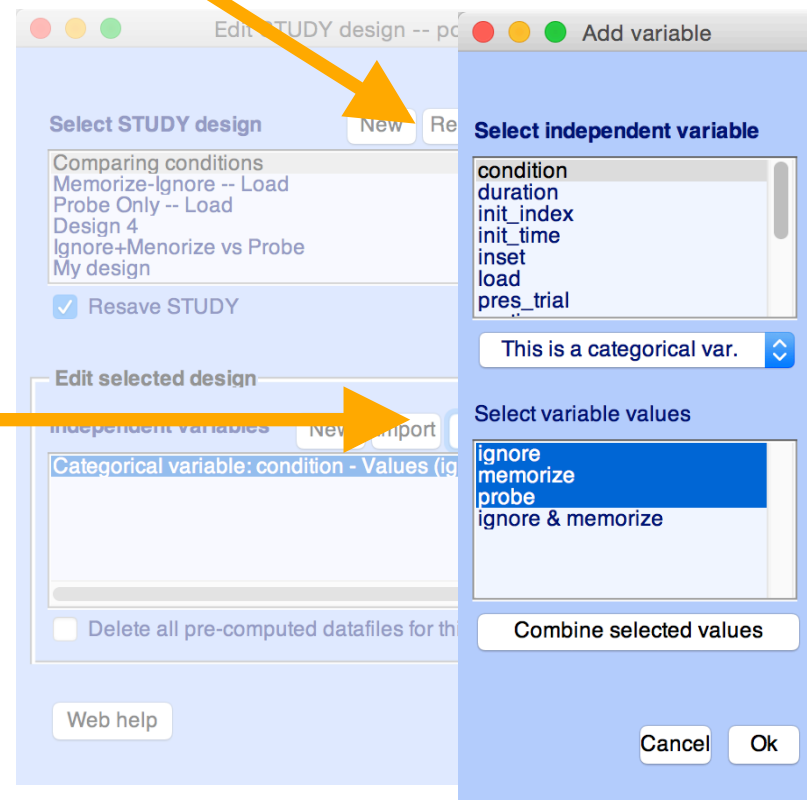

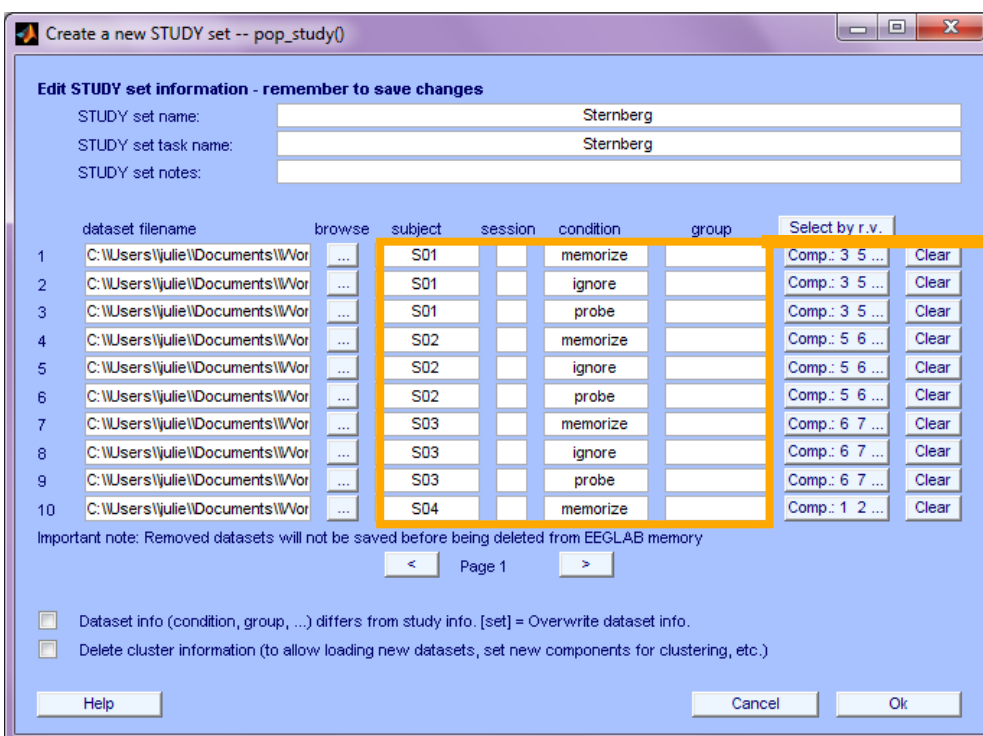

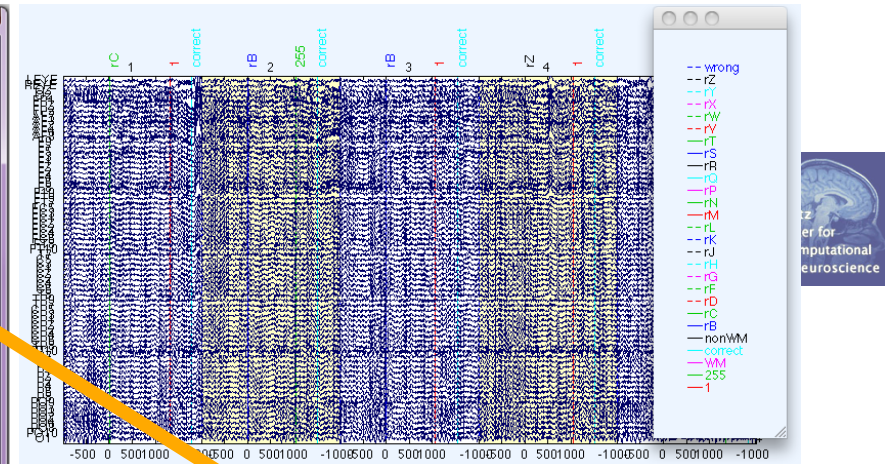

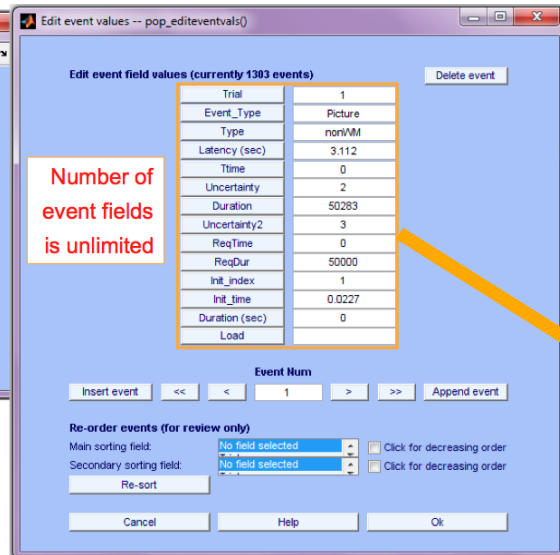

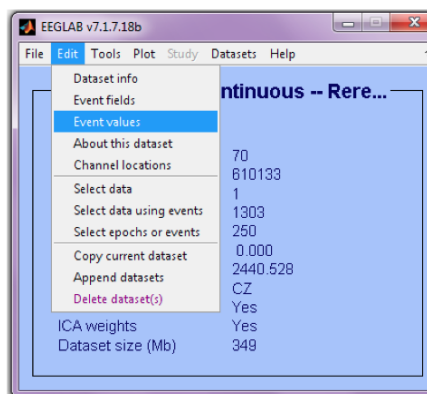

Create design

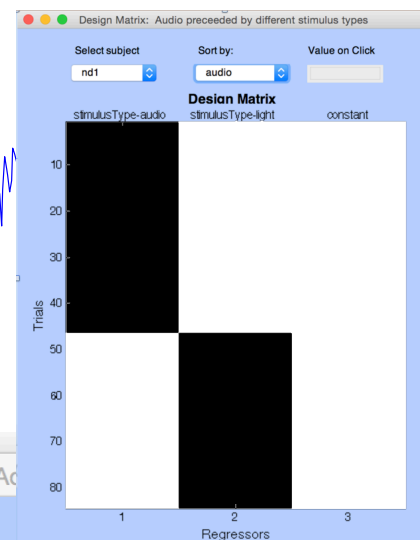

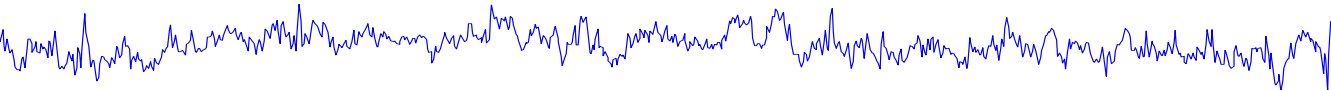

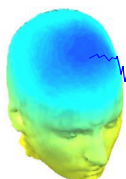

1x3 design

Set ERSP/ITC plotting parameters -- pop_erspparams()

ERSP/ITC plotting options

Time range in ms [Low High] -500 1000

Freq. range in Hz [Low High] 3 30

Power limits in dB [Low High]

Plot scalp map at time [ms]

Plot scalp map at freq. [Hz]

ITC limit (0-1) [High]

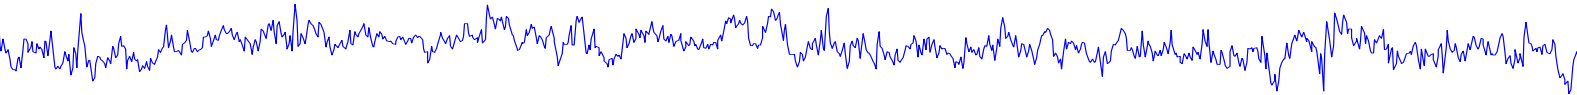

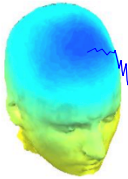

☐ Compute common ERSP baseline (assumes additive baseline)

Cancel

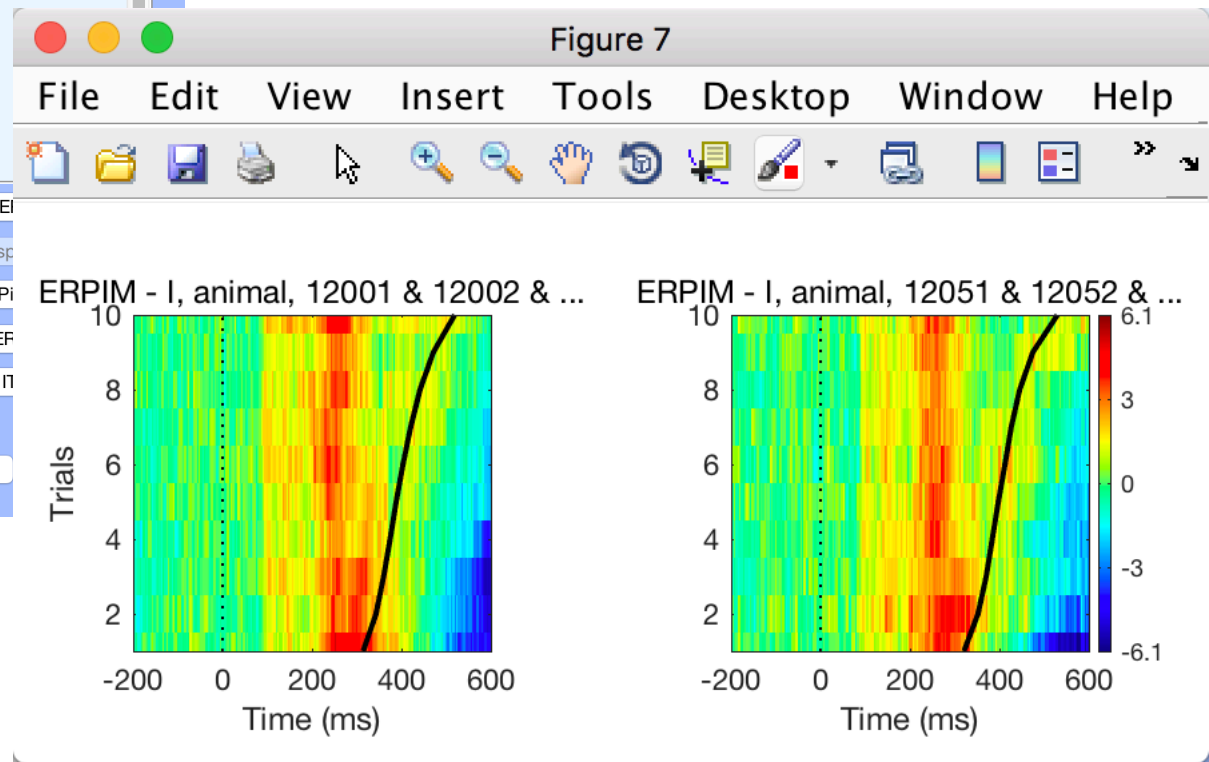

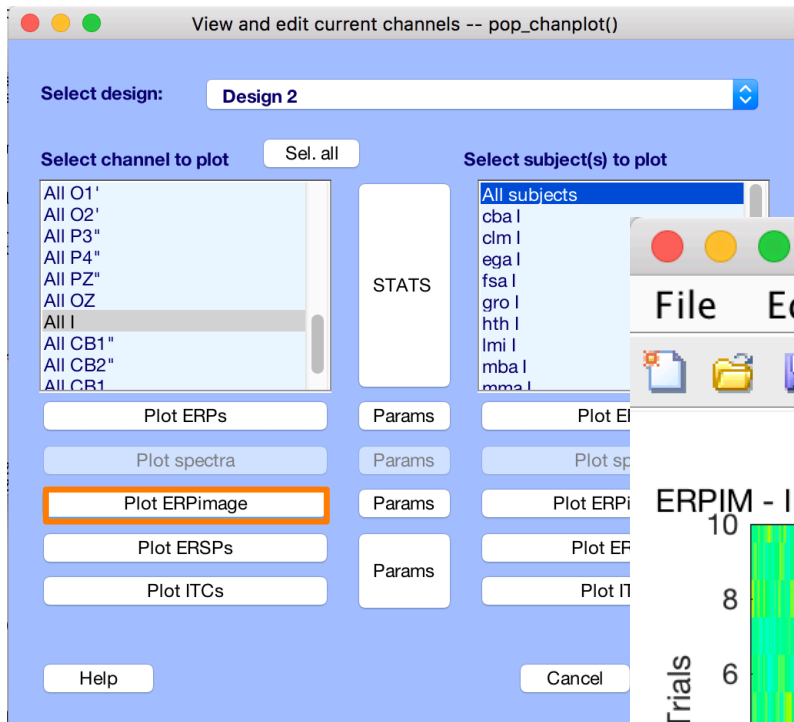

Ok

This dialog box, titled 'Set ERSP/ITC plotting parameters -- pop_erspparams()', contains settings for ERSP/ITC plotting. It features a section 'ERSP/ITC plotting options' with input fields for 'Time range in ms [Low High]' (set to -500 1000), 'Freq. range in Hz [Low High]' (set to 3 30), and 'Power limits in dB [Low High]'. To the right are fields for 'Plot scalp map at time [ms]', 'Plot scalp map at freq. [Hz]', and 'ITC limit (0-1) [High]'. At the bottom, there is a checkbox for 'Compute common ERSP baseline (assumes additive baseline)' and 'Cancel'/'Ok' buttons. An orange arrow from the 'Params' button in the top window points to this dialog.

ERP-image across subjects

Delorme, A., Miyakoshi, M., Jung, T.P., Makeig, S. (2014) **Grand average ERP-image plotting and statistics: A method for comparing variability in event-related single-trial EEG activities across subjects and conditions.** J Neurosci Methods. 2014 Oct 22. pii: S0165-0270(14)00363-X. doi: 10.1016/j.jneumeth.2014.10.003

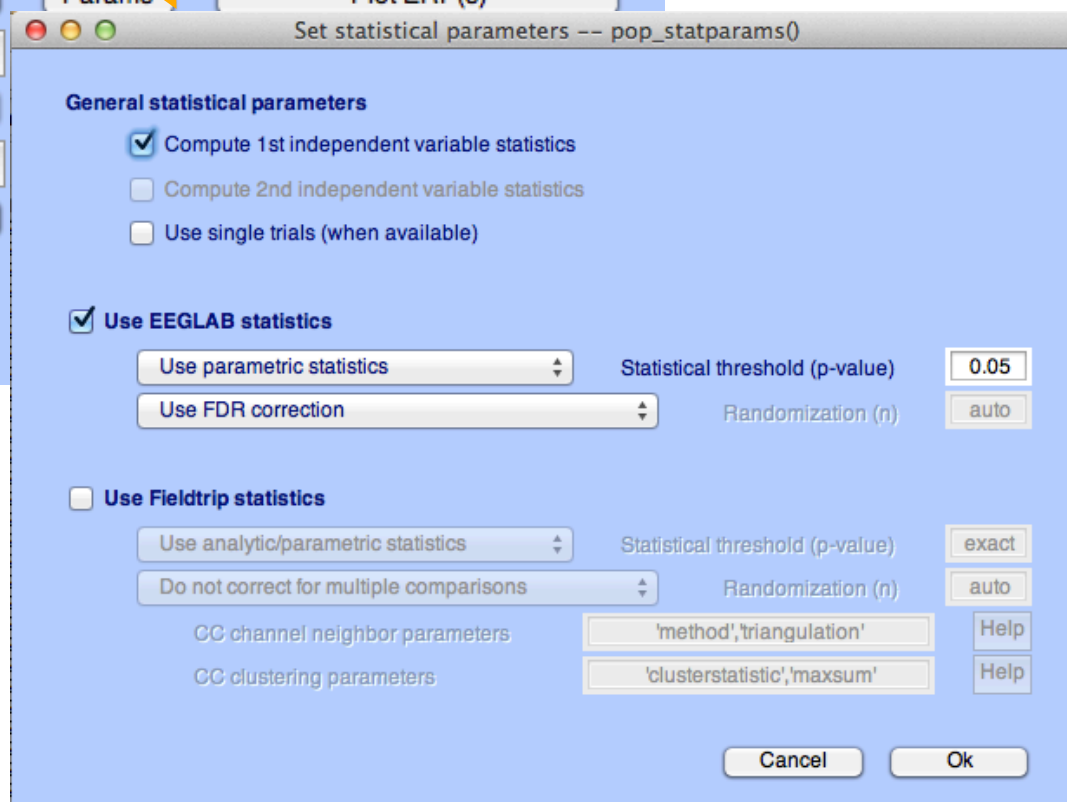

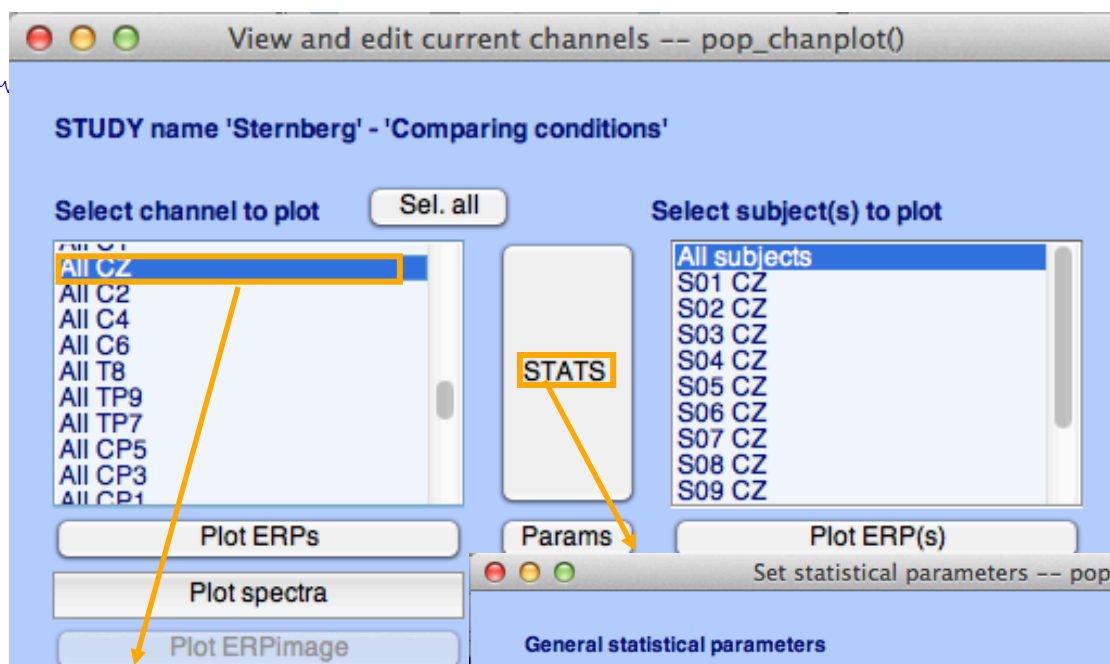

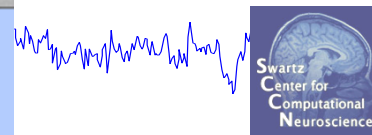

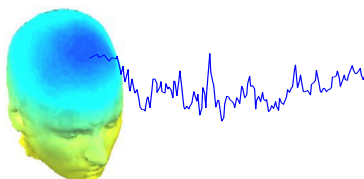

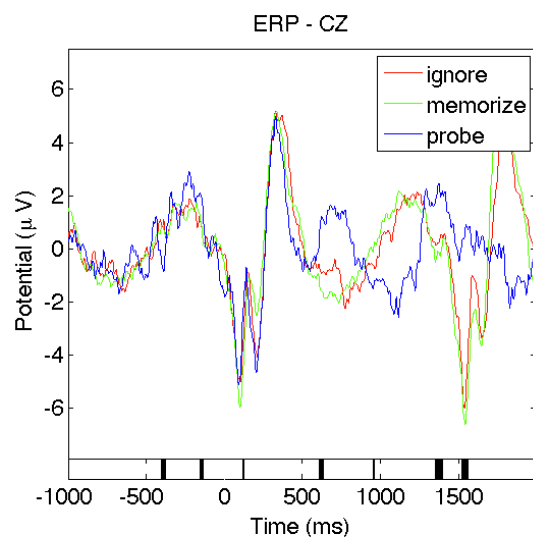

Figure 4: Channel ERP

std_stat() function in EEGLAB

Exercises

1. Load “stern.study” file in STUDY folder
2. Edit STUDY design and delete current variable(s)
3. Create a new indep. Variable design to compare Ignore vs. Memorize letter
4. Recompute spectrum and ERP.
5. Plot spectrum and ERP for electrode Fz
6. Plot scalp topography at 10 Hz (spectrum) and 200-300 ms (ERP) for both conditions
7. Spectrum for electrode Fz within 1 to 50 Hz and compute parametric statistics (with and without FDR correction)
8. Plot scalp topography at 10Hz for both conditions using permutation statistics cluster correction (Fieldtrip – statistics)
