New EEG tools and measures

John Iversen et al.

(repeat)

2:30 PM -- B1: Automated source classification and online ICA - Luca Pion-Tonachini

2:55 PM -- B2: EEG Nonstationarity and AMICA - Shawn Hsu

3:15 PM -- B3: MEG and Joint MEG/EEG source decomposition - John Iversen

3:30 PM -- Coffee break

3:50 PM -- B4:

Phase/amplitude coupling (PAC) - Ramon Martinez-Cancino

4:20 PM -- B5:

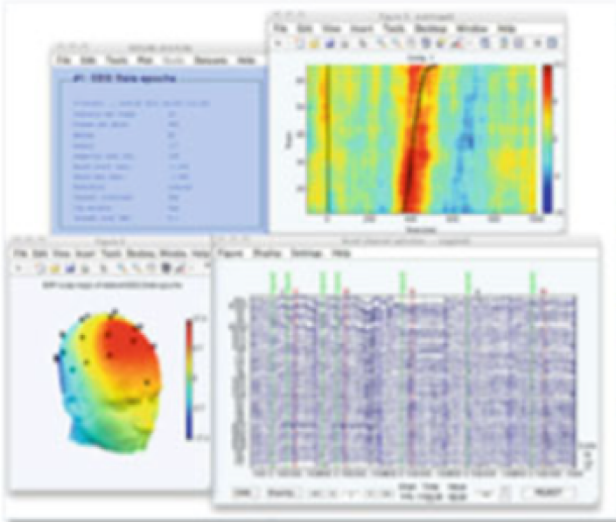

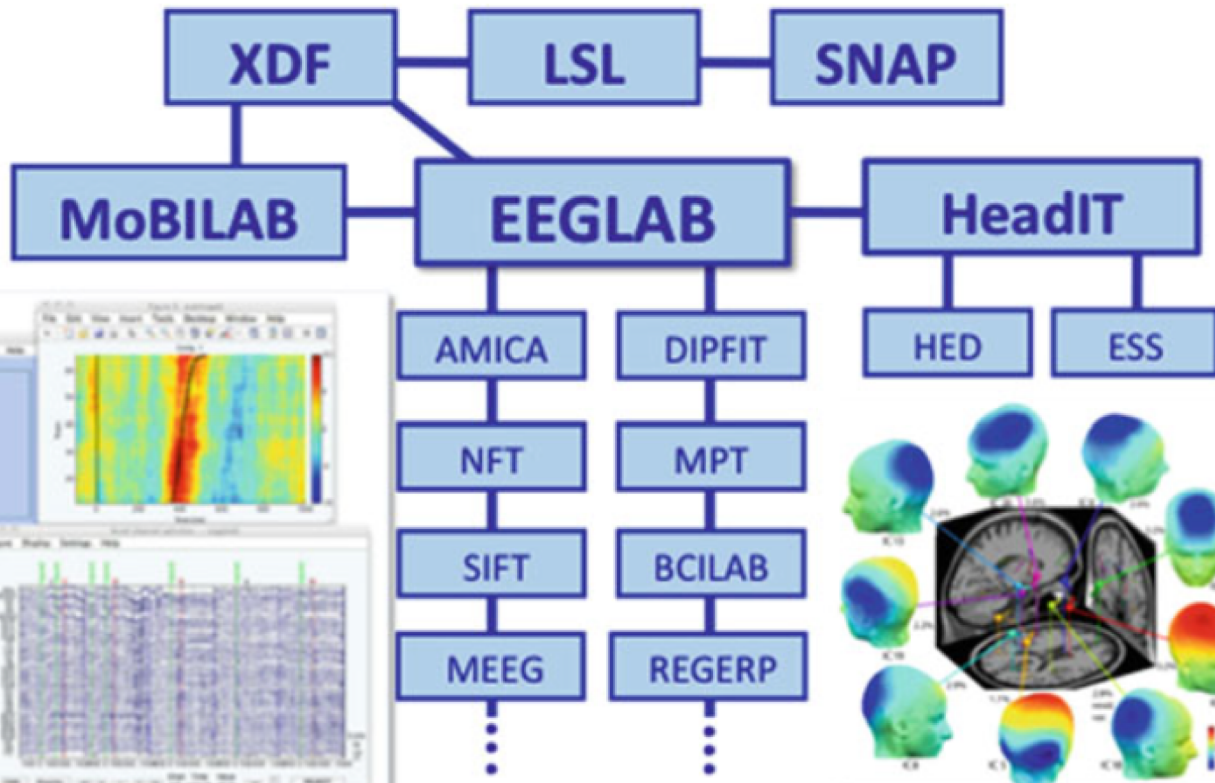

Neuroinformatic methods to enable large-scale EEG data analysis (BIDS, HED, and beyond) - Nima Bigdely-Shamlo

4:50 PM -- B6: EEGLAB and High-Performance

Computing: The Open EEGLAB Portal to High Performance Computing & OpenNeuro - Scott Makeig & Amitava Majumdar

5:20 PM -- B7: EEG Meta-

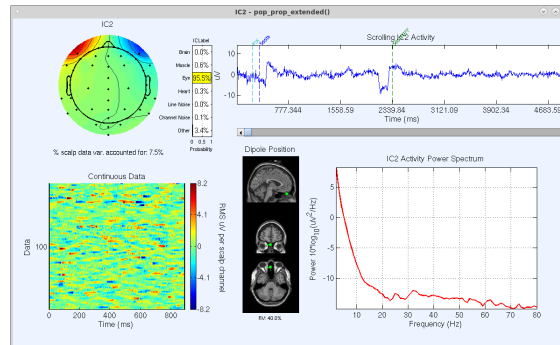

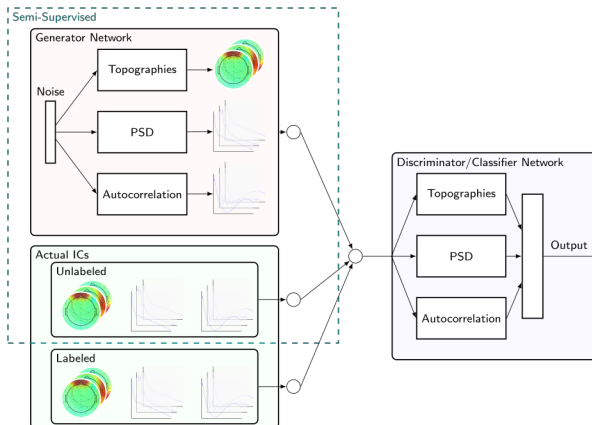

Analysis Q & A - Makeig, Bigdely-Shamlo, Majumdar

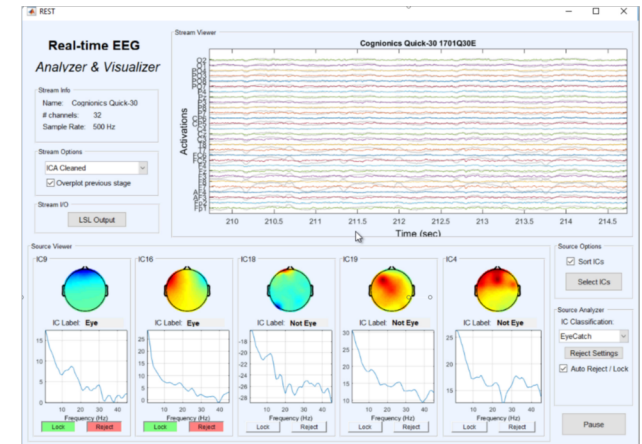

Luca: Automated source classification and online ICA

- Solutions:
- 1) IC classification is subjective & laborious, especially for massive datasets
 - 2) ICA computed on entire experiment assumes stationarity

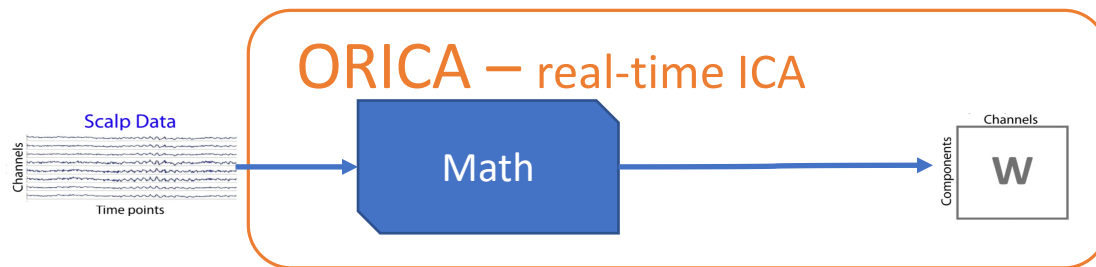

ICLabel – classify ICs automatically

REST

Clean streaming data in near-real-time

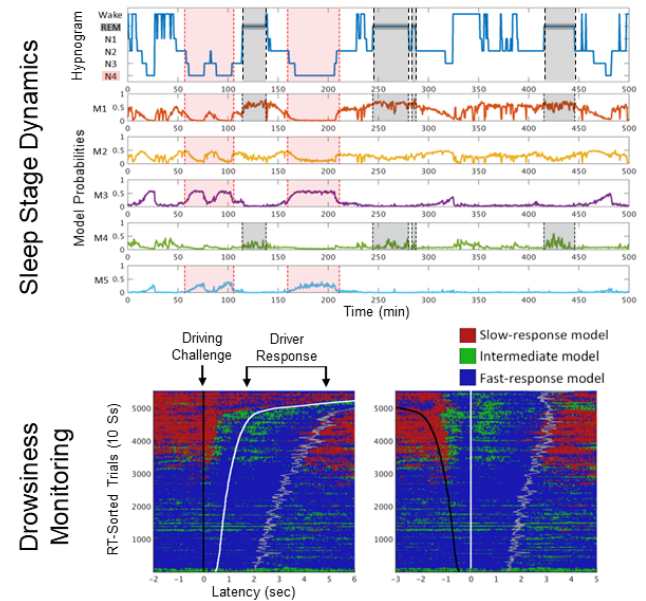

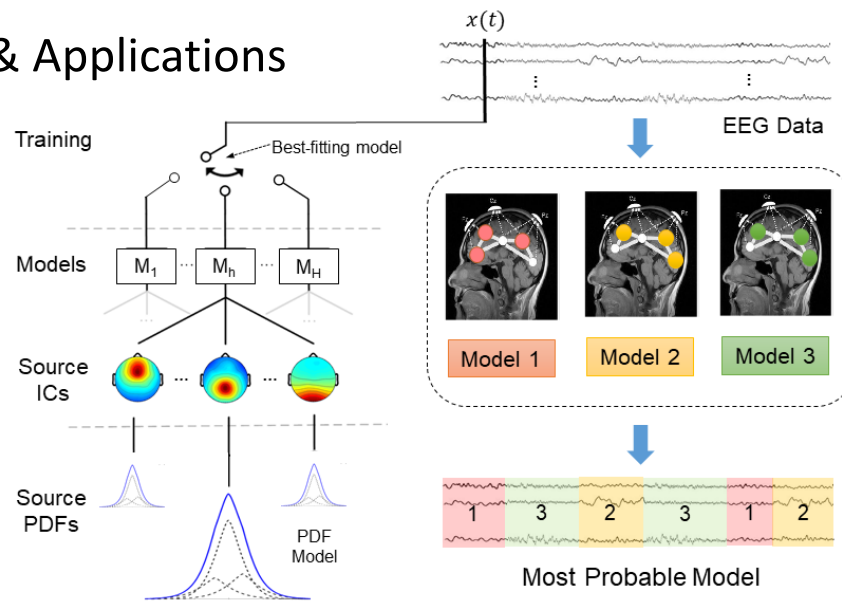

Shawn: EEG Nonstationarity and AMICA

- Why AMICA?

1. Better IC decomposition than Infomax ICA
2. Model EEG non-stationarity & brain-state changes

A. Theory & Applications

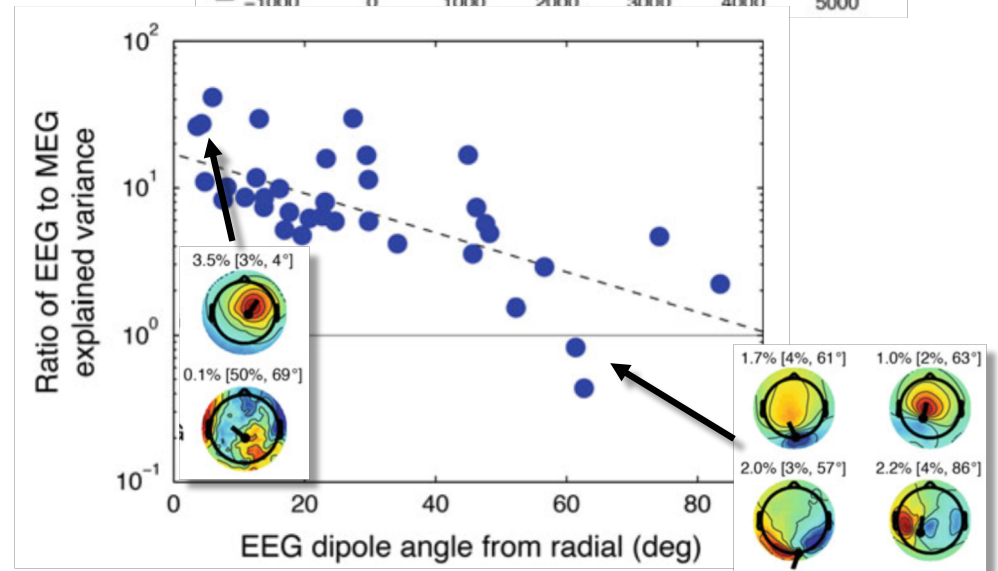

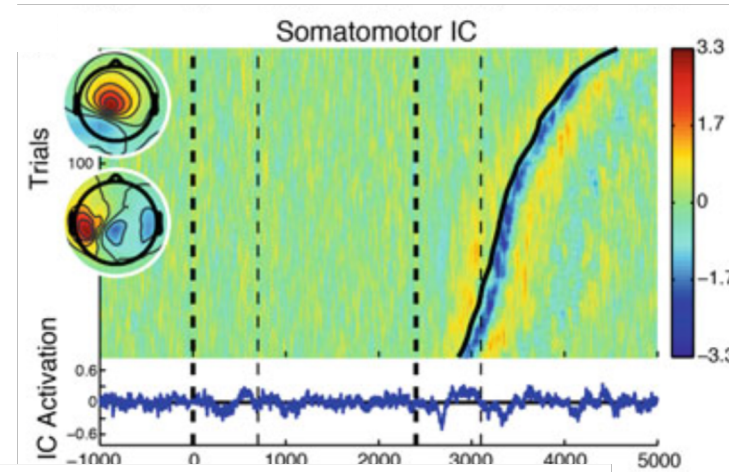

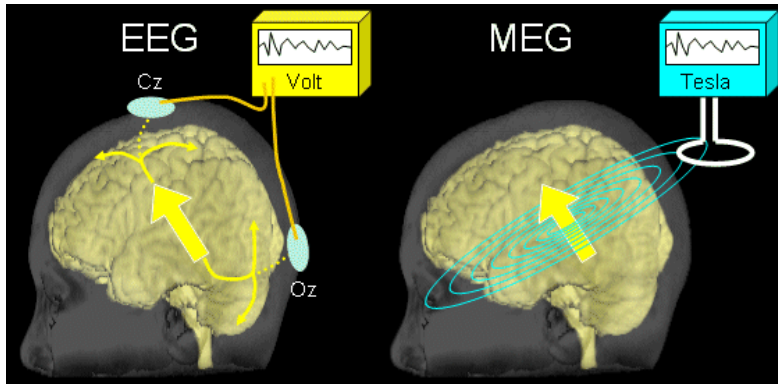

B. Practicum

2 plugins (**AMICA** & **postAmicaUtility**) + run on **Neuroscience Gateway (NSG)**

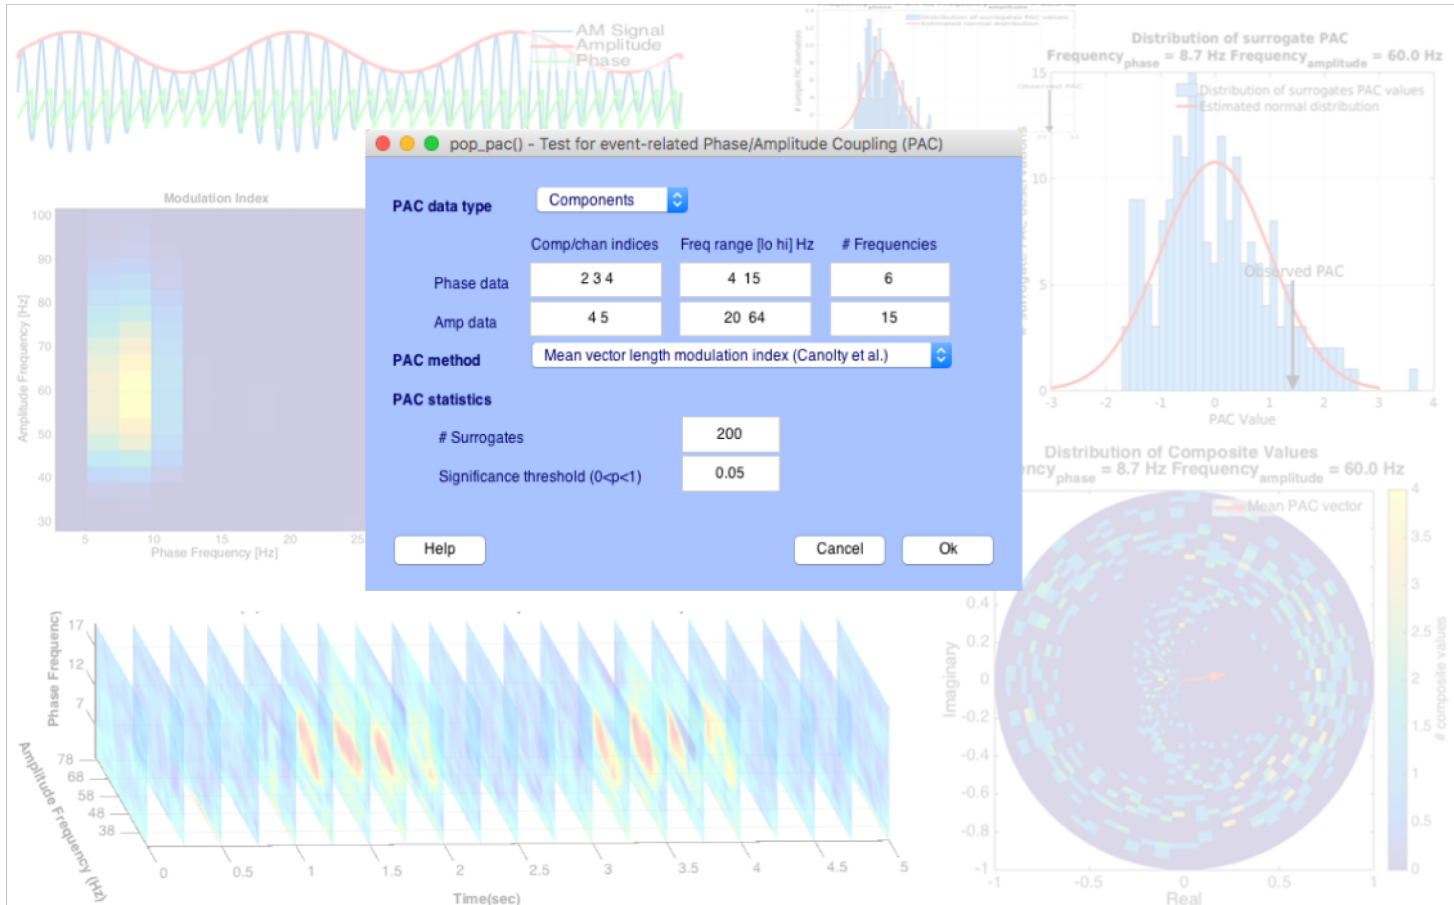

Hsu et al, NeuroImage, 2018

John: MEEG Analysis in EEGLAB

Ramón: Phase Amplitude Coupling (PAC)

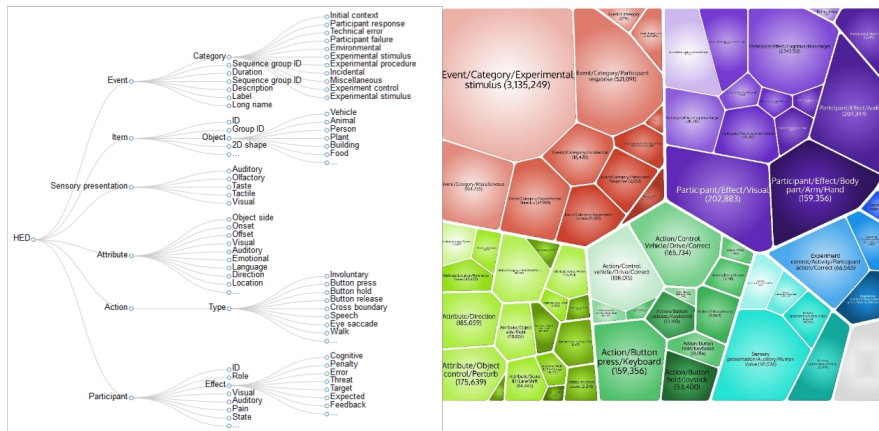

Solution: Adding advanced measures of cross-frequency analysis to EEGLAB through plugins

Nima: Neuroinformatic methods to enable large-scale EEG data analysis (BIDS, HED and beyond)

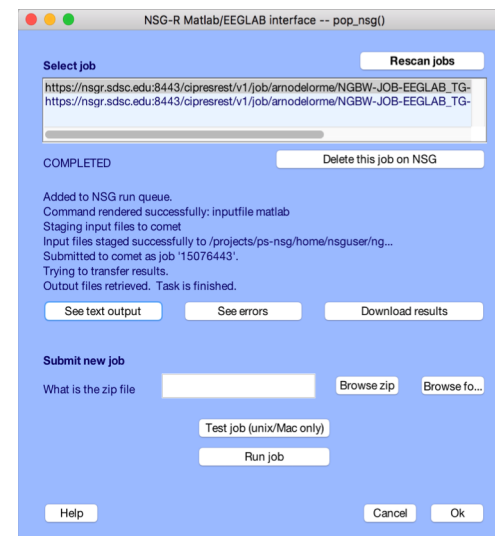

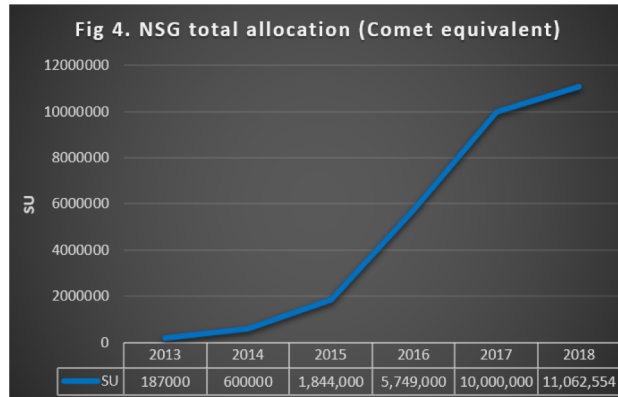

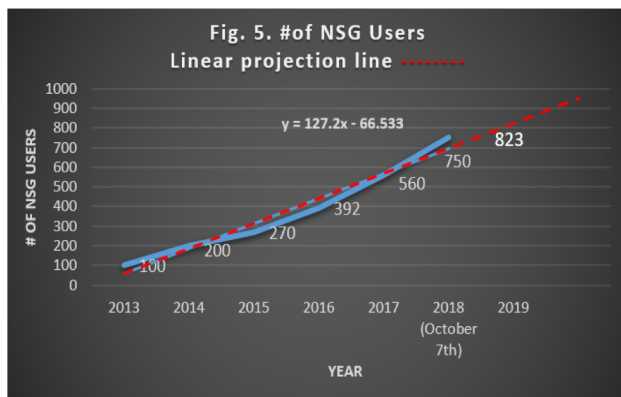

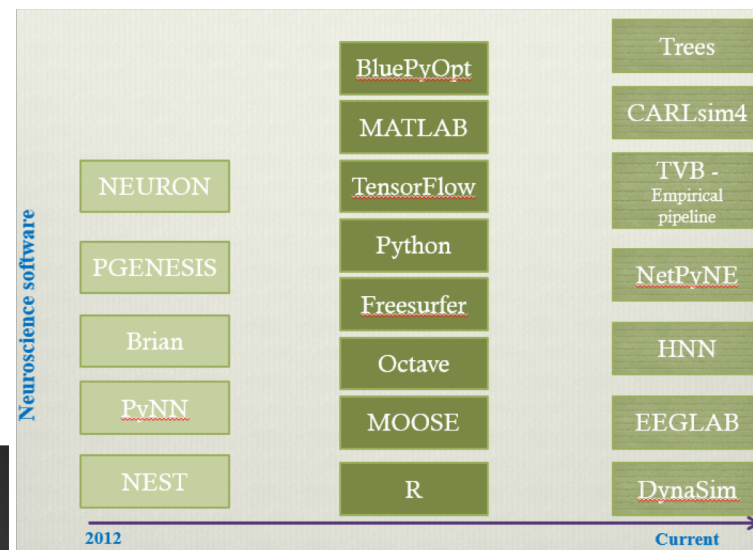

This presentation will cover several enabling neuroinformatics technologies, including Hierarchical Event Descriptors (HED) and EEG Study Schema (ESS), for automated large-scale EEG analysis. HEDTools EEGLAB plugin for event tagging and epoching will also be introduced.

HED

Amit: Neuroscience Gateway

- Providing access to neuroscience tools and software
- Tools and software optimally installed on various high performance, high throughput and academic cloud resources
- Neuroscientists can easily – via an easy to use web interface – use these tools and software on supercomputing resources free of charge
- Programmatic access also available
- Used for large scale modeling and data processing

Results of processing 87 128-channel EEG data sets from the Child Mind Institute data base. Alpha power decreases with age (age groups in years shown in columns) in both eyes open and closed conditions (rows).
