WANTED
Avid word game players

Seeking healthy volunteers
to participate in a research study
of brainwave activity

Electroencephalographic (EEG or brainwave) recordings are a completely non-invasive way to study patterns of activity in the working human brain.

Subjects will participate in the following activities:

- Sit for about an hour while we position and calibrate a recording cap on your head
- Play word games on a computer for about 2 hrs. while we record your brain's electrical activity

Total participation time will be 3 – 4 hours.

You will be reimbursed $15 per hour.

We ask that you be healthy, right handed, native English speaking, and an avid player of word games and puzzles (Crosswords, Anagrams, Scrabble, etc.)

If interested, please contact Ryan at the Swartz Center for Computational Neuroscience, UCSD

DO YOU SUFFER FROM DEPRESSION?

A UCSD research lab is currently looking for subjects with possible current depression to participate in an EEG experiment testing the effects of EEG-biofeedback training on behavioral and physiological markers of depression.

SUBJECTS WILL BE COMPENSATED $15/HOUR

Subjects must be:

1) currently not taking medication
2) willing to participate in depression/mood surveys to assess depression severity
3) willing to visit the lab for up to 12 consecutive weeks (≈18 total sessions)
4) willing to wear a comfortable electrode cap with conductive gel
5) willing to sit in a chair for the duration of each EEG session (≈3 hours)
